GATE-2016 CHEMISTRY(CY) Study material

- Recruitment of Graduate Trainees(GTs) in **ONGC** through GATE-2016
- Recruitment of **BARC** through GATE-2016

Feature of study material

- Each and every chapter is covered thoroughly in the suggestion
- It contains different type of rearrangement reactions, intermediate (carbocations, carbanions, carbenes, nitrenes, benzyne, free radicals.), oxidation ,reduction etc.
- Smart method to solve short & broad questions. e.g. Is Fe_3O_4 normal/inverse spinal ? Does it conduct electricity ?
- Arrangement of “Theory portion” is highly student friendly e.g. from the Maxwell relation we can tell easily whether the reaction is spontaneous or not.
- Spectroscopy portion(theory and application in organic and inorganic molecule) is clearly explained by short and quick way.
- Bio inorganic chemistry portion focuses in such a way so that student can remember in an easy manner.
- Photochemistry portion of organic molecule is described in a short and concise way with a special importance on the reaction mechanism.
- Reagents of organometallic compound like Pd, Cu, Zn, Mg, Li, B, Si used in synthetic organic chemistry are also covered in the study material
- Instrumental methods of analysis portion is also included in this study material.
- Entire syllabus is covered in suggestion and study materials.
